

Turk's Head Instructions

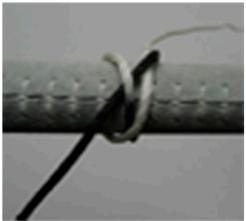

Step 1.
Wrap cord around the tube section.

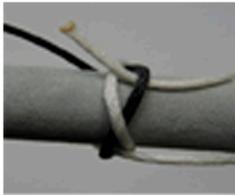

Step 6.
Pull the working end of the cord through the weave.

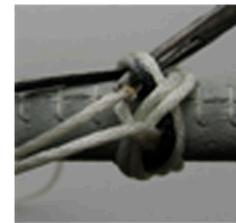

Step 11.
Remember to simply follow the initial path of the black cord to add layers to the knot.

Step 2.
Thread cord under the black cord.

Step 7.
Thread the working end of the cord under the black and over the white.

Step 12.
Continue until 3 strands of the cord are woven.

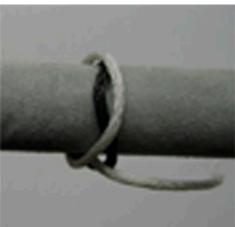

Step 3.
Look at the knot from opposite side.

Step 8.
Pull the working end of the cord through the weave.

Step 13.
You must now remove the "leader" end (black) of the cord. Unweave it using the hemostat.

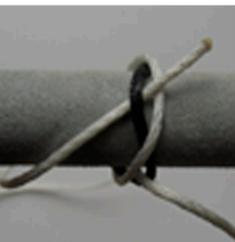

Step 4.
Lift up the white section of the cord on left side and cross it over the black section of the cord. Hold it in place.

Step 9.
You have completed the initial part of the Turk's Head knot. Follow the path of the original (black) cord to add sections to the knot.

Step 14.
Continue weaving the white section of the cord until three strands are shown. Use the hemostat to tighten cord before marking it.

Step 5.
Thread the working end of the cord under the black and over the white.

Step 10.
Use the hemostat to thread the cord through the Turk's Head knot.

Step 15.
Mark the end of the "leader" cord to finish the knot.
